

N.Lagos and R.Setchi. **Product support knowledge**, 2nd IPROMS e-conference, 3-14 July 2006, Cardiff, UK

This paper aims to discuss and define product support knowledge. The paper analyses product support from a task-based point of view and accordingly introduces the concept of a PProduct Support System (PRSS). Next it outlines the constituents that form product support knowledge and illustrates their definitions. It is concluded that semantically rich models are needed in order to express the multidimensionality of product support knowledge.
